

DMAG PRODUCTS DO NOT BREAK THE BUDGET.

CHOOSING DMAG MEANS PAYING UP TO 50% LESS

DMAG SPEEDGATES ARE PRICED TO WORK WITH YOUR BUDGET.

Physical traffic management and access control devices such as turnstiles and speedgates are sometimes seen as out of reach due to price.

An industry dominated by a few manufacturers and little choice has allowed this pricing myth to become a widespread belief.

DMAG's pricing, warranty, installation, service and support were built to make the decision to choose a DMAG product easy- easy for you, and easy for the end user.

LONGER LIFESPAN

DMAG systems can operate to 10,000,000 cycles before potential component failure. That's 3x better than the industry standard.

LESS MAINTENANCE

DMAG products are engineered to operate with minimal maintenance. This reduces overall operating costs.

DMAG PRODUCTS CAN GO FROM THE SHIPPING BOX TO IN USE WITHIN 2 HOURS.

THERE'S A REASON THE INSTALLATION GUIDE IS ONLY 3 PAGES LONG.

DMAG SPEEDGATES ARE DESIGNED TO MAKE THIS AN EASY INSTALL.

Systems that arrive in pieces and require on-site assembly represent a significant investment in time.

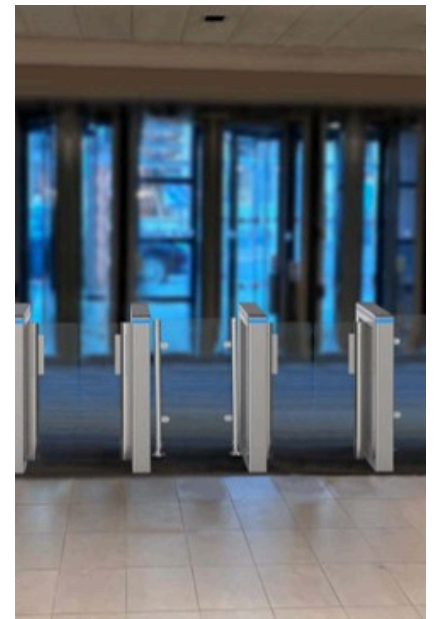

Installation manuals that run into the hundreds of pages do little to make the install faster.

The DMAG answer? Modular systems and a 3-page manual.

ONE GATE PER BOX

One complete gate is factory tested and then shipped in one crate. Attach the gate glass or arms, mount to the floor and calibrate.

MODULAR DESIGN

Each gate is a "module", and this design means easier operation and maintenance.

DMAG's speed gates and turnstiles arrive ready to be installed. Whether the installer has done dozens of gate systems or has never installed one at all, a DMAG system will be ready for traffic within a few hours.
